

In ALUDEC, as a responsible member of society and a member of the Automotive Industry, we are aware of our influence on the environment, therefore, within the framework of an Environmental Management System, we carry out our activity committed to protect environment , pollution prevention, compliance with applicable legislative requirements or other environmental requirements that we subscribe to, as well as adaptation to the new demands of society in terms of environmental sustainability.

In this sense, we integrate the Environmental Management System throughout our organization with a life cycle analysis approach that allows us to address environmental risks, and implement economically viable methods that reduce our environmental impact throughout the stages of the life cycle. life of our operations, products and services.

For this, our Policy constitutes the framework for the definition and implementation of environmental improvement objectives appropriate to our context in society, and thus, advance in the continuous improvement of our environmental performance.

One of the fundamental pillars of this improvement in environmental performance will be our commitment to promote awareness of respect for the environment in all our employees, with the appropriate training and awareness programs; as well as, motivate the members of our supply chain, so that they adopt an environmental management system consistent with the following principles and commitments of ALUDEC:

Circular economy and waste management

- Active collaboration in the transformation from linear consumption to circular consumption of resources; promoting the consumption of recycled and/or renewable raw materials, as well as the reduction, reuse and recycling of the waste generated.

Management of water and natural resources

- Promoting the responsible use of natural resources such as water, optimizing its consumption and preventing its contamination after use.

Responsible management of chemical products and restricted substances

- Carrying out a safe and responsible management of the chemical substances used, and work actively in the identification and gradual substitution of any restricted substance identified in our process/product.

Air quality

- Adopting available and technically feasible technologies in manufacturing processes to contribute to improving air quality in activity areas and control polluting atmospheric/acoustic emissions.

Energy efficiency

- Contributing to energy efficiency by supervising and promoting the reduction of energy consumption and/or promoting the use of renewable energy sources. Climate change: Greenhouse Gas (GHG) emissions Contribute to the challenge of Climate Change by promoting a low carbon economy through the development of objectives and strategic plans focused on reducing GHG emissions.
- Promoting transparency by informing our stakeholders of our performance in terms of environmental sustainability and especially in relation to our contribution to Climate Change.

Responsible land use

- Developing our activity taking into account the biodiversity of ecosystems and habitats, as well as acting on the prevention of harmful modification of the soil that we occupy.

This Environmental Policy and the organization's Environmental Management System will be reviewed and updated, in order to ensure that its effectiveness and control are adequate.

In short, ALUDEC acquires the commitment to carry out its industrial activity in a manner that respects the environment and makes rational use of natural resources, in order to contribute to sustainable development.

Ponte Caldelas on 13th March 2023

Ernesto Lumbreras Pelaez (General Manager)
